

### Change to Lupus Anticoagulant Profile

Beginning April 1, 2007, the Lupus Anticoagulant Profile will no longer include Antiprothrombin Antibodies (APT) IgG and IgM. Anticardiolipin Antibodies (ACA) IgG and IgM will be added to the profile. This change reflects the current International Society of Thrombosis and Hemostasis Subcommittee guidelines for the diagnosis of Lupus Anticoagulants. APT IgG and IgM will still be available as a single test as well as part of the Extended APS Profile.
