

## **Disinfection Instructions for Toileting**

---

### **For ambulatory patient using restroom:**

1. Place 350mL of disinfectant (ratio of 200 mL of disinfectant and 400 mL of water) into toilet after each use – water will turn yellow.
2. Place half hat on seat ready for next use, if applicable.
3. After toileting, empty specimen into toilet, close lid, then flush x 2.
4. Discard half hat in CLOSED trash can.
5. Place 350mL of disinfectant (ratio of 200 mL of disinfectant and 400 mL of water) into toilet.
6. Wipe down toilet seat and toilet handle with bleach wipe.

### **For non-ambulatory patients using bedside commode:**

1. Place 100mL of disinfectant (ratio of 200 mL of disinfectant and 400 mL of water) into bucket prior to use.
2. After use, measure total output.
3. Open and add one packet of solidifier to bucket.
4. Once solidified, discard bucket in CLOSED trashcan located in restroom.
5. Wipe down bedside commode with bleach wipe.
6. Replace with new bucket.
7. Add 100mL of disinfectant (ratio of 200 mL of disinfectant and 400 mL of water) to bucket for next use.
