

Dear Patients:

We, at the Emory Breast Imaging Center, believe that a thorough review of your imaging is very important. This allows us to provide the needed and most up-to-date information to your entire breast team. We will need the following to perform a thorough evaluation of your imaging studies:

ALL current Mammograms: images performed during your recent breast evaluation. Your Mammogram studies may include:

- Your most recent routine breast screening (images of both breasts to be included).
- All mammogram images from any diagnostic evaluation you had (images performed as a result of an abnormal screening exam or because you are having a breast problem).
- Mammograms done during stereotactic needle biopsy (if applicable).
- Mammogram images done after a needle biopsy to check for placement of a marking clip (if applicable).
- If possible, any older mammogram studies available for comparison. Including exams from prior years will help us make a full evaluation.

ALL current Ultrasound images

Your Ultrasound studies may include:

- Ultrasound performed to evaluate a lump or a finding seen on mammogram.
- Ultrasound images taken during a needle biopsy procedure.

Any current breast **MRI**s done.

Any current **PET-CT** scans done.

Reports for all exams submitted.

—————[PLEASE COMPLETE CHECKLIST BELOW]—————

To expedite your care, please present the **checklist** below to your Imaging Center or Radiology Department. Remember that your exams may have been done at different sites. **Note: Images may be uploaded to LifeImage (the Imaging Center where you had your imaging may be able to help with this) or submitted on CD in DICOM format.**

Request a link to LifeImage by emailing teleradiology@emoryhealthcare.org

****ALL IMAGES MUST BE SUBMITTED IN DICOM FORMAT**

- All mammogram screening mammogram images from this year (both breasts)
- Prior screening exams for comparison, when possible
- All diagnostic mammogram images from from this years (and any prior exams if possible)
- Post procedure mammogram
- All diagnostic ultrasound images from this years (and any prior exams if possible)
- All images obtained during needle biopsy, either ultrasound- or stereotactic-guided
- Breast MRI, if done
- PET-CT, if done
- Reports for each of the above exams
